Energy Wheel Operation

55 to 90% <u>total</u> (sensible + latent) effectiveness

RTU Integrated ERV

- Cost effective method of providing a RTU with an ERV
- Retro-fit or factory install
- Optional economizer and power exhaust function

RTU Combination Curb

Why Correct Humidity Is Important

% RELATIVE HUMIDITY

Humidity Buildup at Part Load

Load Condition	Design Load Sunny Day	Part-Load Condition				
Occupancy	100%	20%				
Outdoor Air Condition	95 db, 76 wb	80 db, 71 wb				
Supply Air Cfm Cooling Coil Dewpoint	15,000 53.5°F	15,000 65.5°F				
Room Conditions	75 db 48% rh	^{75 db} 71% rh				

Reduced Operating Range

- Range of ventilation air conditions introduced to the HVAC unit is significantly reduced
- HVAC unit cooling system can be downsized and will operate at a higher sensible heat ratio (less dehumidification required), which is typical of most packaged DX rooftop units
- HVAC unit heating system can be downsized or possibly even eliminated

"Weather Compressor"

IECC 2012: Requirement for Energy Recovery

Required in many high population areas (gyms, theaters, etc.)

Check map for climate zone

Look up supply fan CFM and OA fraction

Note: IECC 2006 and 2009 only required ERVs above 70% OA on a 5,000 supply CFM system (regardless of climate) **C403.2.6 Energy recovery ventilation systems.** Where the supply airflow rate of a fan system exceeds the values specified in Table C403.2.6, the system shall include an energy recovery system. The energy recovery system shall have the capability to provide a change in the enthalpy of the outdoor air supply of not less than 50 percent of the difference between the outdoor air and return air enthalpies, at design conditions. Where an air economizer is required, the energy recovery system shall include a bypass or controls which permit operation of the economizer as required by Section C403.4

	TABLE C40	3.2.6

7, 8	≥ 2500	≥ 1000	> 0	> 0	> 0	> 0				

Exception: An energy recovery ventilation system shall not be required in any of the following conditions:

- Where energy recovery systems are prohibited by the International Mechanical Code.
- Laboratory fume hood systems that include at least one of the following features:
 - 2.1. Variable-air-volume hood exhaust and room supply systems capable of reducing exhaust and makeup air volume to 50 percent or less of design values.
 - 2.2. Direct makeup (auxiliary) air supply equal to at least 75 percent of the exhaust rate, heated no warmer than 2°F (1.1°C) above room setpoint, cooled to no cooler than 3°F (1.7°C) below room setpoint, no humidification added, and no simultaneous heating and cooling used for dehumidification control.

- Systems serving spaces that are heated to less than 60°F (15.5°C) and are not cooled.
- Where more than 60 percent of the outdoor heating energy is provided from site-recovered or site solar energy.
- Heating energy recovery in Climate Zones 1 and 2.
- Cooling energy recovery in Climate Zones 3C, 4C, 5B, 5C, 6B, 7 and 8.
- Systems requiring dehumidification that employ energy recovery in series with the cooling coil.
- Where the largest source of air exhausted at a single location at the building exterior is less than 75 percent of the design *outdoor air* flow rate.
- Systems expected to operate less than 20 hours per week at the *outdoor air* percentage covered by Table C403.2.6

Example Rebates for ERVs

- Minnesota Power
 - \$0.75 per CFM
- Focus on Energy in Wisconsin
 - \$0.75 per CFM
- Minnesota Xcel
 - \$1.00 per CFM
- Peoples Gas and North Shore Gas in Illinois
 - \$0.75 per CFM
- All other Midwestern utilities use custom rebate programs

Please read all rules and qualifications for each incentive. Staged Air Volume (SAV) ...or Single Zone VAV ...or Multi-stage Air Volume (MSAV) ...or Adaptive Fan Control

SAV[™] System Overview

Standard <u>and</u> High Efficiency units Electro-mechanical <u>or</u> Digital Controls VFD: pre-configured <u>and</u> adjustable Adaptive Integrated Economizer Control: Prevents over/under ventilation

Industry Acronym	Definition	Application Need
VAV	Variable Air Volume	Typically multi-zone, large applied systems
SAV	Staged Air Volume	Single zone VAV, simple, saves energy!
CAV	Constant Air Volume	Traditional System

Indoor Fan Motor

Belt Drive 2 Speed

Fan <u>Automatically</u> Adjusts To Unit Operation Per New Standard

Why Two Speed Fan Control?

SAV[™] SYSTEM DESIGN Why a VFD?

- A two speed (two winding) indoor fan motor would require the next size motor frame in order to achieve the same CFM. The VFD system can use the smaller standard motor frame.
- VFDs can also provide advanced options for special application including soft start capabilities, higher power factors, and lower full load KVA values
- VFDs also allow programming to meet very specific applications, and to adjust the speed of the powered motor.

Variable Frequency Drives (VFDs)

- Retro-fit to fans
- Varies the power input to motor
- On average building fan systems in the US are oversized by 60%*
- If a motor running at 100% speed costs \$1,000/month, what about:
 - Running at 75% speed = \$420
 - Running at 50% speed = \$125
 - Due to the Affinity Laws
- Soft start means less wear & tear on couplings, belts, and motors
- Payback less than 18 months

*John Hopkins Univ. AICGS Policy Report

FAN LAW BASICS Energy saved...

Let's quickly re-visit the third fan law:

Brake horsepower (BHP) varies as the cube of the fan speed:

BHP_1	$[\frac{RPM_1}{3}]^3$
$\overline{BHP_2}$	RPM_2

 $BHP_2 = BHP_1$

For simplicity, if we assume $RPM_1 = 1000$, $BHP_1 = 2.0$, and then decrease fan speed to 677 RPM (or 67%)

 $[RPM_2]$

 BHP_{2}

Staged Air Volume (SAV)

- Improves humidity control and saves energy
- Saves about 25-30% electrical energy in Midwest climate
- Minimum OA needs means of automatic adjustment when fan slows
- Similar logic could potentially be applied to heating mode if RTU has multiple stage heat, but pay attention to heat exchanger airflow needs

ASHRAE 90.1-2010 Fan Power Limitation

6.4.3.10 Single Zone Variable-Air-Volume Controls. HVAC systems shall have variable airflow controls as follows:

- b. Effective January 1, 2012, all air-conditioning equipment and air-handling units with direct expansion cooling and a cooling capacity at AHRI conditions greater than or equal to 110,000 Btu/h that serve single zones shall have their supply fans controlled by two-speed motors or variablespeed drives. At cooling demands less than or equal to 50%, the supply fan controls shall be able to reduce the airflow to no greater than the larger of the following:
 - 1. Two-thirds of the full fan speed, or
 - The volume of outdoor air required to meet the ventilation requirements of Standard 62.1.
- All manufacturers offer (or will) SAV on 10 ton RTUs and up...several offer on smaller sizes also
- Note: this is a requirement of ASHRAE 90.1-2010 and 2013, but is not currently included in IECC 2012 (probable for IECC 2015 when published)

High Efficiency RTU w/ SAV Product Design Strategy

Benefits

- Saves Energy
- Greater Comfort
- Better Match, Typical Building Profiles
- Greater IEER's
- Simple Design

SAV[™] SYSTEM DESIGN Key components (electro-mechanical unit)

Compatible Economizer for SAV

New W7220 Economizer controller provides the needed 2-speed operation plus new set up and diagnostic capabilities.

- Large 2-line LCD interface screen for setup, configuration and troubleshooting
- On board fault detection and diagnostics
- Automatic recognized sensor detection
- Incorporates multiple economizer damper set point capabilities for use with multi speed indoor fan motor system
- Demand control ventilation capability

ECONOMIZER IMPACT Why TWO minimum economizer positions?

Eally Speceral ((1670%)) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Booweer with card appendice concomization is 2000 CFM SA (1670%) Boowee

Entering Assumptions:

10 ton 2-speed fan unit with 400 CFM/ton (4000 CFM SA)

800 CFM ventilation requirement (20% SA)

Example Rebates for VFDs

- Minnesota Power
 - \$40-60 per HP
- Focus on Energy in Wisconsin
 - \$50 per HP
- Minnesota Xcel
 - \$400+ ... see side >>>
- ComEd Electric in Illinois
 - \$60 per HP
 - Or as part of new ARC
 - \$92 per HP (DCEO for public bldgs)
- Energizing Indiana
 - \$40 per HP
- Efficiency United in Michigan
 - \$60 per HP

Larger than 200	Requires custom evaluation and							

Please read all rules and qualifications for each incentive.

Choices for SAV

<u>New RTUs</u>

- Carrier/Bryant
- Daikin/McQuay
- Lennox
- Trane

Retro-fit Kits

- CATALYST
- Enerfit
- Digi-RTU
- Honeywell ???

Carrier WeatherExpert vs McQuay Rebel[™] - Efficiency

Gas Heat / Electric Cooling Models

Carrier from product catalogs (April 2012 and March 2013) McQuay from catalog 256-6 (March 2013) and website (Jan 2014) Lennox data not published with SAV included in IEER Trane data not available

Items to Consider When Choosing

- Is the RTU or Retrofit kit available with adaptive integrated economizer control (aka dual minimum setpoints) to ensure minimum ventilation rate is not impacted?
- Is knowledge of a specific brand of DDC controls required?
- Is the SAV option available on their high-end and entry level units or must you get all the bells and whistles just to get SAV?
- Are other advanced options, such as ERV or dehumidification systems available on the same RTU?
- Is VFD field programming required or is it factory set?

The CATALYST is a complete retrofit solution for existing RTUs

transformativewave Catalyst

> Adds 4-5 new sensors and a variable frequency drive. Provides CO2-based demand control ventilation >Advanced economization control sequence. >Variable speed supply fan control Remote web-based communications via smart phone, tablet, or browser.

The CATALYST is a complete retrofit solution for existing RTUs

transformativewave Catalyst

Proven track record of reducing overall energy use by 25%-50% Maintains comfort & IAQ > Automatic air flow adjustments to protect equipment. Solves Power Exhaust problem > Upgrade option replaces thermostats with Tridium BMS control via the web. Demand-Response capable

Constant Volume RTUs

The Most Potential:

Units 5-tons and up
1 hp fan motors and up
All brands and ages
Fan-only = OK

The CATALYST is delivered as a complete retrofit "kit"

Pre-engineered, pre-programmed, and can be installed in only a few hours. **Produces a repeatable and scalable process with predictable results.**

Energy Savings Strategies

Integrated Economizer with Differential Changeover Control

Variable Speed Fan Control to Match the Needs of the Space Served

Elimination of Over-Ventilation via Demand Control Ventilation (DCV)

Remediation of Service and Operational Issues

ECONOMIZER PERFORMANCE VERIFICATION

Fault detection monitors for numerous conditions including economizer damper failure and sensor failures.

CATALYST Service Switch

A multi-position selectable switch for service personnel use. This will enable techs to operate the system in any mode of operation for maintenance purposes.
The use of the service switch will suppress data collection by the elQ Platform to avoid negative impact on fault detection and analytics.

Empowers contractors to easily perform preventative maintenance and verify economizer functions without undermining the CATALYST installation.

Department of Energy

New study by PNNL shows CATALYST saved an average energy savings of 57% on 66 RTUs across 4 US climate zones.

Proudly Operated by Battelle Since 1965

Department of Energy

The DOE chose to work with Transformative Wave's CATALYST based on "its features & product maturity"

Proudly Operated by Battelle Since 1965

transformativewave
 catalyst

Fault Detection has identified fan belts slipping on Units 1-3. Humidity has historically been an issue at this store during the "monsoon" season. The CATALYST supermarket control sequence has enabled us to get the store humidity issues under control.

transformativewave catalyst

The CATALYST has a four-year track record of proven results.

The product is mature and fully commercialized with almost 1,000 installations.
