

Perspectives on the Zero Energy Home

Energy Design Conference
February 24, 2016
Duluth, MN

CONTINUING EDUCATION CREDITS

- In accordance with the Department of Labor and Industry's statute 326.0981, Subd. 11,
- “This educational offering is recognized by the Minnesota Department of Labor and Industry as satisfying **1.5 hours** of credit toward **Building Officials and Residential Contractors code/energy** continuing education requirements.
- For additional continuing education approvals, please see your credit tracking card.

PERSPECTIVES ON THE ZERO ENERGY HOME

- Part 1: Overview of Zero Energy Ready Home
 - Pat Huelman, University of Minnesota
- Part 2: Custom Home Builder Perspective
 - Ray Pruban, Amaris Custom Homes
- Part 3: Team Opti-MN Impact Home
 - Laurel Johnston / Collin Coltman, University of Minnesota
- Part 4: Affordable Housing Perspective
 - Brian Wimmer, Rochester Area Habitat for Humanity

PERSPECTIVES ON THE ZERO ENERGY HOME

- Are there buyers who would like their utility bills to go away?
- How much is that worth to them?
- Can it be done?

PERSPECTIVES ON THE ZERO ENERGY HOME

- Absolutely – with a couple of caveats!
- Homes will always require energy.
- Can the home produce as much as it uses?
 - and don't forget the \$20 per month in fees.
- What does it cost?

ACT 1: THE SET-UP

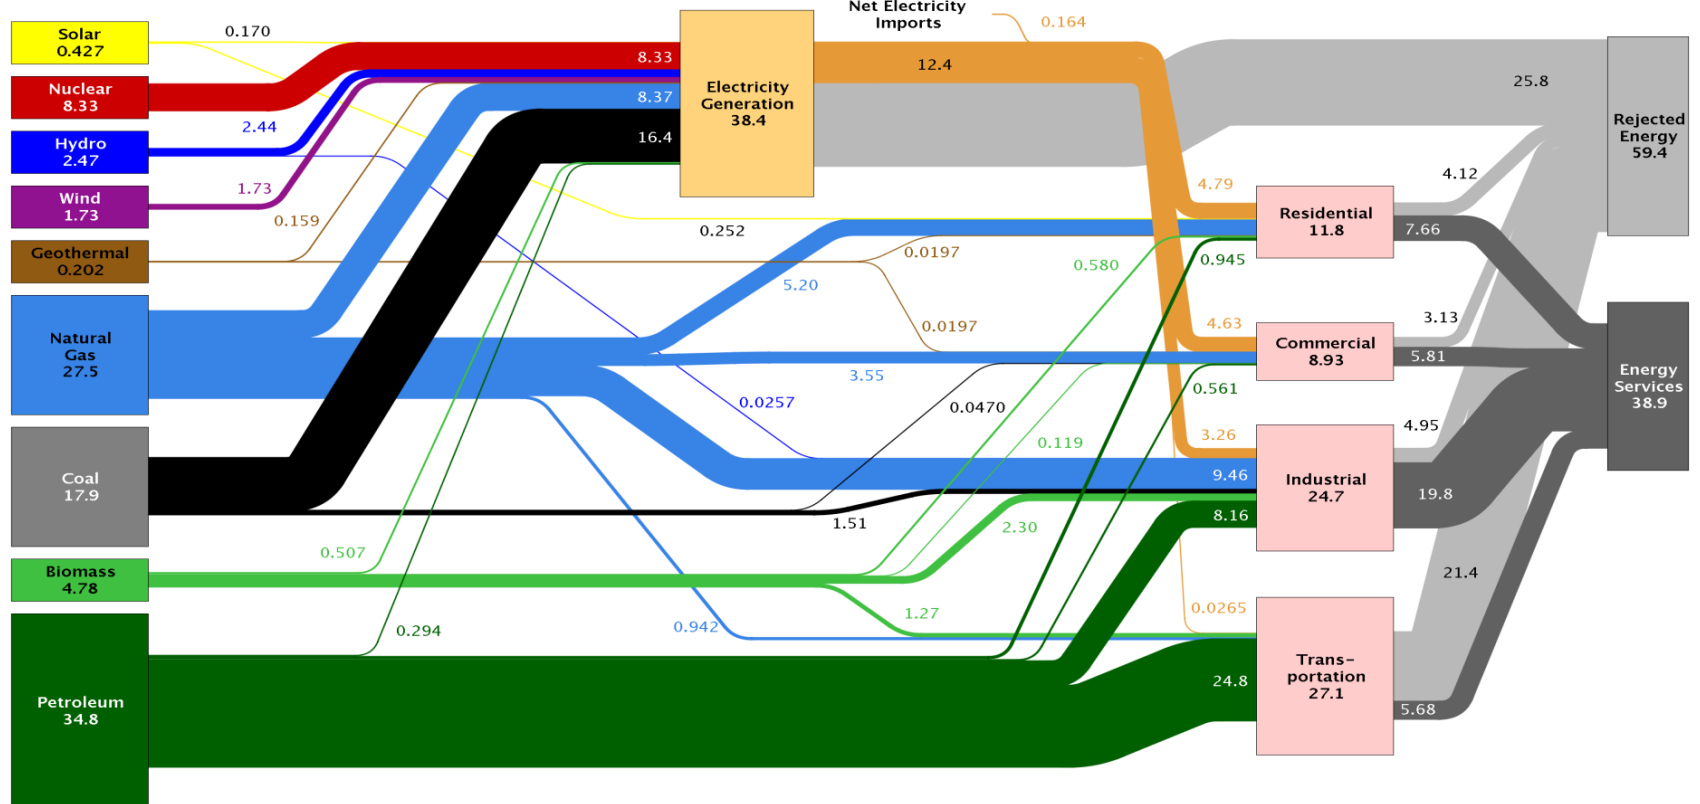

- Seeing the Big Energy Picture
- Getting the Best Bang for Our \$
- A Small Hiccup along the Way

THE ENERGY PICTURE IN THE U.S.?

Estimated U.S. Energy Use in 2014: ~98.3 Quads

Source: LLNL 2015. Data is based on DOE/EIA-0035(2015-03), March, 2014. If this information or a reproduction of it is used, credit must be given to the Lawrence Livermore National Laboratory and the Department of Energy, under whose auspices the work was performed. Distributed electricity represents only retail electricity sales and does not include self-generation. EIA reports consumption of renewable resources (i.e., hydro, wind, geothermal and solar) for electricity in BTU-equivalent values by assuming a typical fossil fuel plant "heat rate." The efficiency of electricity production is calculated as the total retail electricity delivered divided by the primary energy input into electricity generation. End use efficiency is estimated as 65% for the residential and commercial sectors 80% for the industrial sector, and 21% for the transportation sector. Totals may not equal sum of components due to independent rounding. LLNL-MI-410527

ENERGY IN OUR HOMES

Total energy use in homes

Source: U.S. Energy Information Administration, 1978 and 2005 Residential Energy Consumption Survey

ENERGY STRATEGIES

- Conservation
 - Lowest cost; best return
- Efficiency
 - Moderate expense; good return
- Alternatives
 - Most expensive; lowest return

ENERGY SAVED VS. DOLLAR SPENT

FORMULA FOR ENERGY EFFICIENT HOMES

- **Passive Design**
 - Simple shapes, good orientation
- **Building Enclosure**
 - More insulation
 - Efficient windows & doors
 - Airtight construction
- **Mechanical Systems**
 - High-efficiency equipment
 - Efficient appliances & lighting
- **Proper Operation & Maintenance**

BUT THAT IS THE EASY PART

- The tougher part is how to save energy, without causing moisture and indoor air quality concerns?
 - When you remove heat flow you are also removing drying potential.
 - When you air seal (to retard moisture flows) you have less dilution of indoor pollutants.

CAN IT GET WORSE?

- The home building industry in the U.S. is incredibly diverse and fragmented.
- For a typical house, 25+ subcontractors will touch that home in some way.
- It is easy to see how things can get done improperly, undone by others, or simply missed.

A GROWING EPIDEMIC: NOTMYJOBITIS

ACT 2: A SYSTEMS-GUIDED APPROACH TO HIGH-PERFORMANCE HOME

- What if you could build a home with...
 - incredibly low energy bills,
 - superior thermal and acoustical comfort,
 - built-in long-term durability,
 - good healthy indoor air?
- And you can have it all within a reasonable budget!

Ultra-High Efficiency

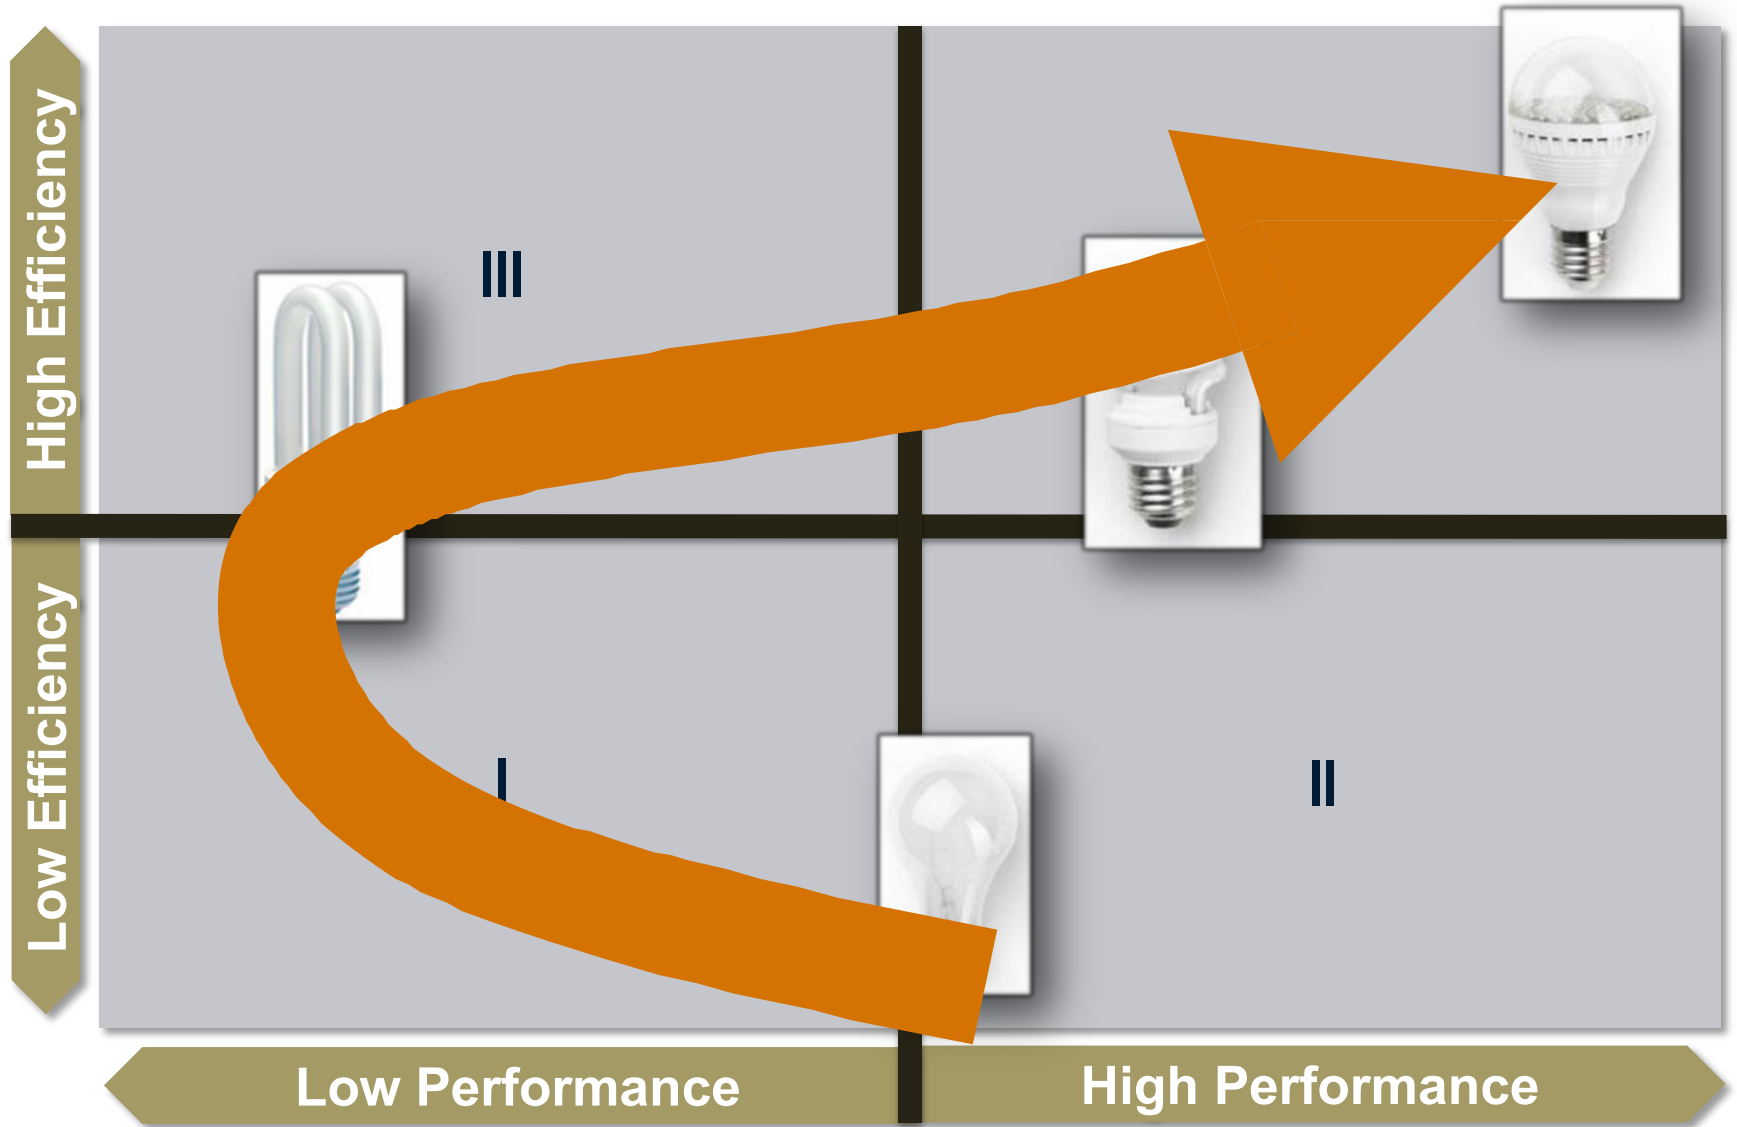

High- Performance

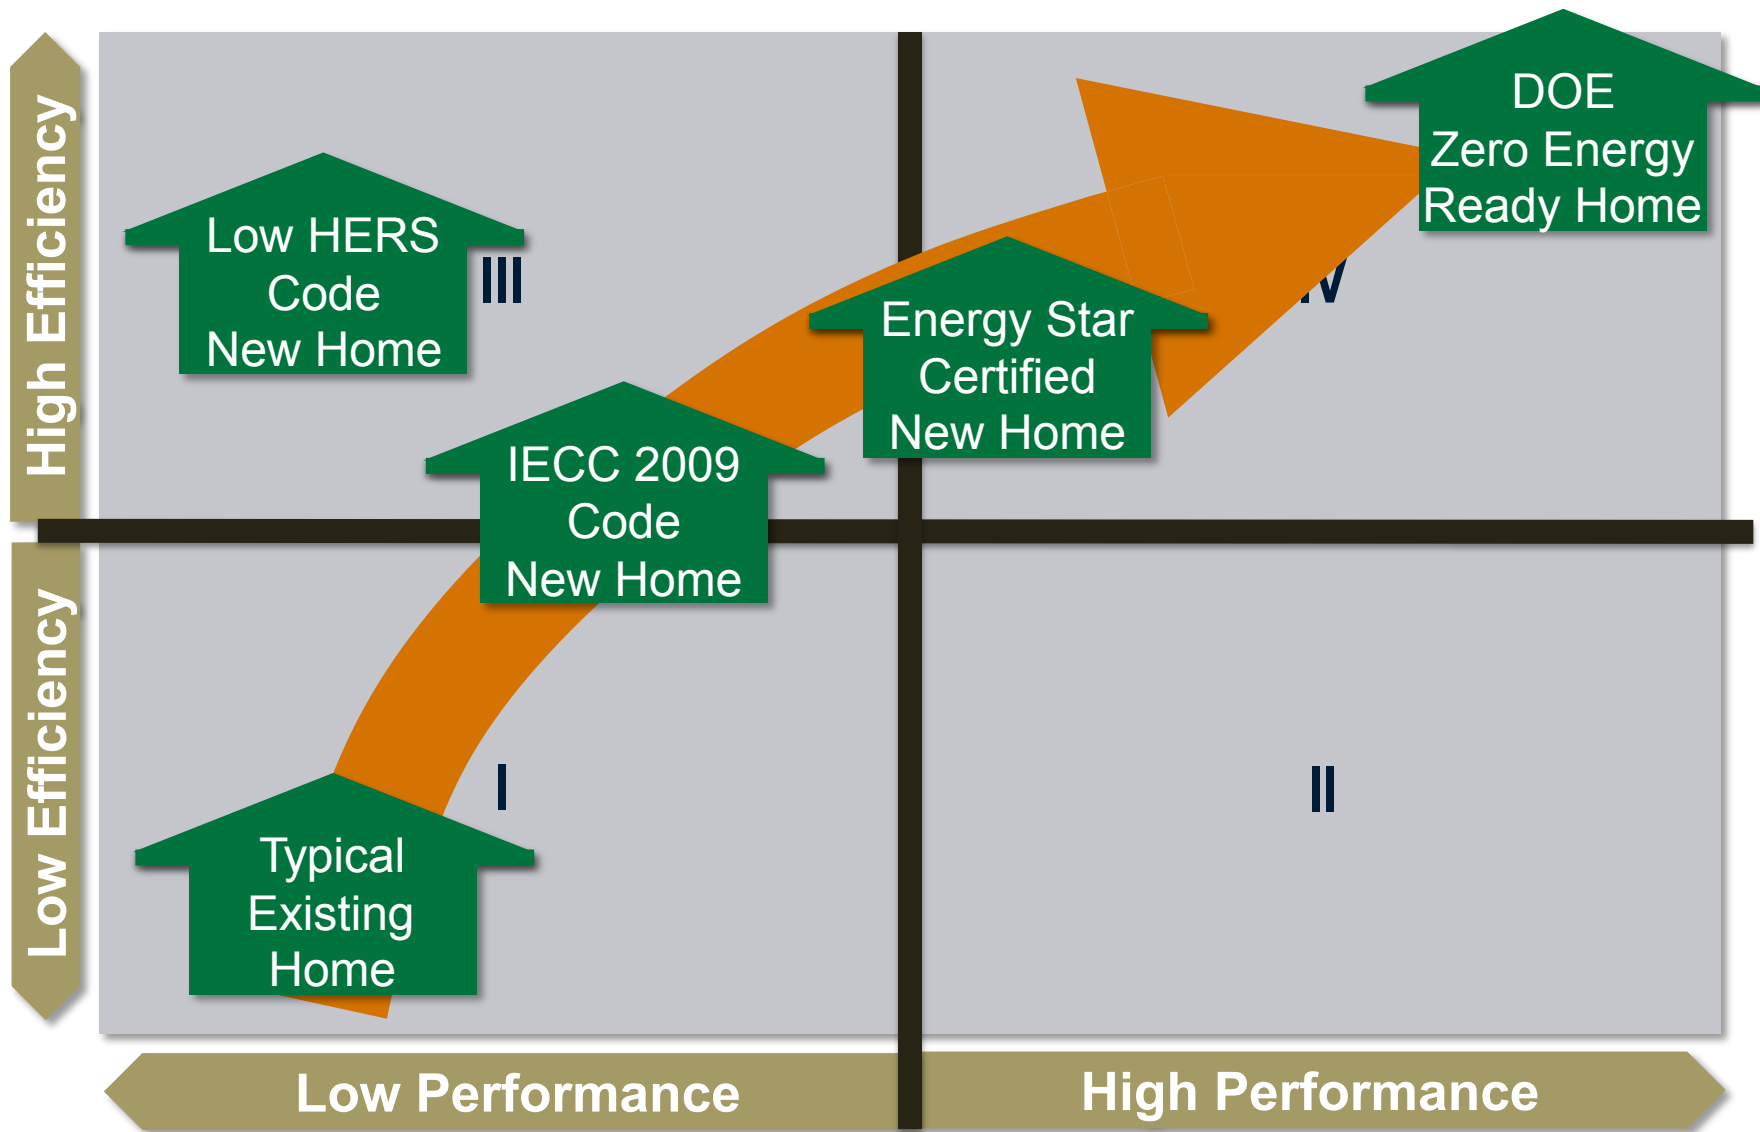

- Enclosure
- Low-Load HVAC
- Efficient Components

- Affordable
- Comfort
- Health
- Durability
- Renewable Readiness
- Water Conservation
- Disaster Resistance

Efficiency + Performance Example

DOE Zero Energy Ready Home Path

Building America Strategy

Goal:
Homes so efficient, a small renewable energy system can offset all or most energy consumption

can be offset by
renewable energy.

DOE ZERO ENERGY READY HOME

- Why build to DOE ZERH?
 - Consumer motivations
 - Builder motivations
- What does DOE ZERH require?
 - Overall a performance-based approach
 - With some prescriptive components
- How do you get there?
 - Strategic partners and resources

DOE ZERO ENERGY READY HOME

- Business Metrics
 - Competitive advantage
 - Reduced callbacks & warranty
 - Improved sales and referrals

- Harvesting the Value Innovation Premium
 - If you can successfully communicate,
 - the innovation and the value,
 - the market leader can command better margins.

DOE ZERO ENERGY READY HOME

- In my view, this program is ...
 - Built on a technically solid platform
 - Focused on the right things (not just energy)
 - In the right way (performance-based)
 - At the right level (strategic differentiation)
 - With a delivery process that is credible, but not onerous.

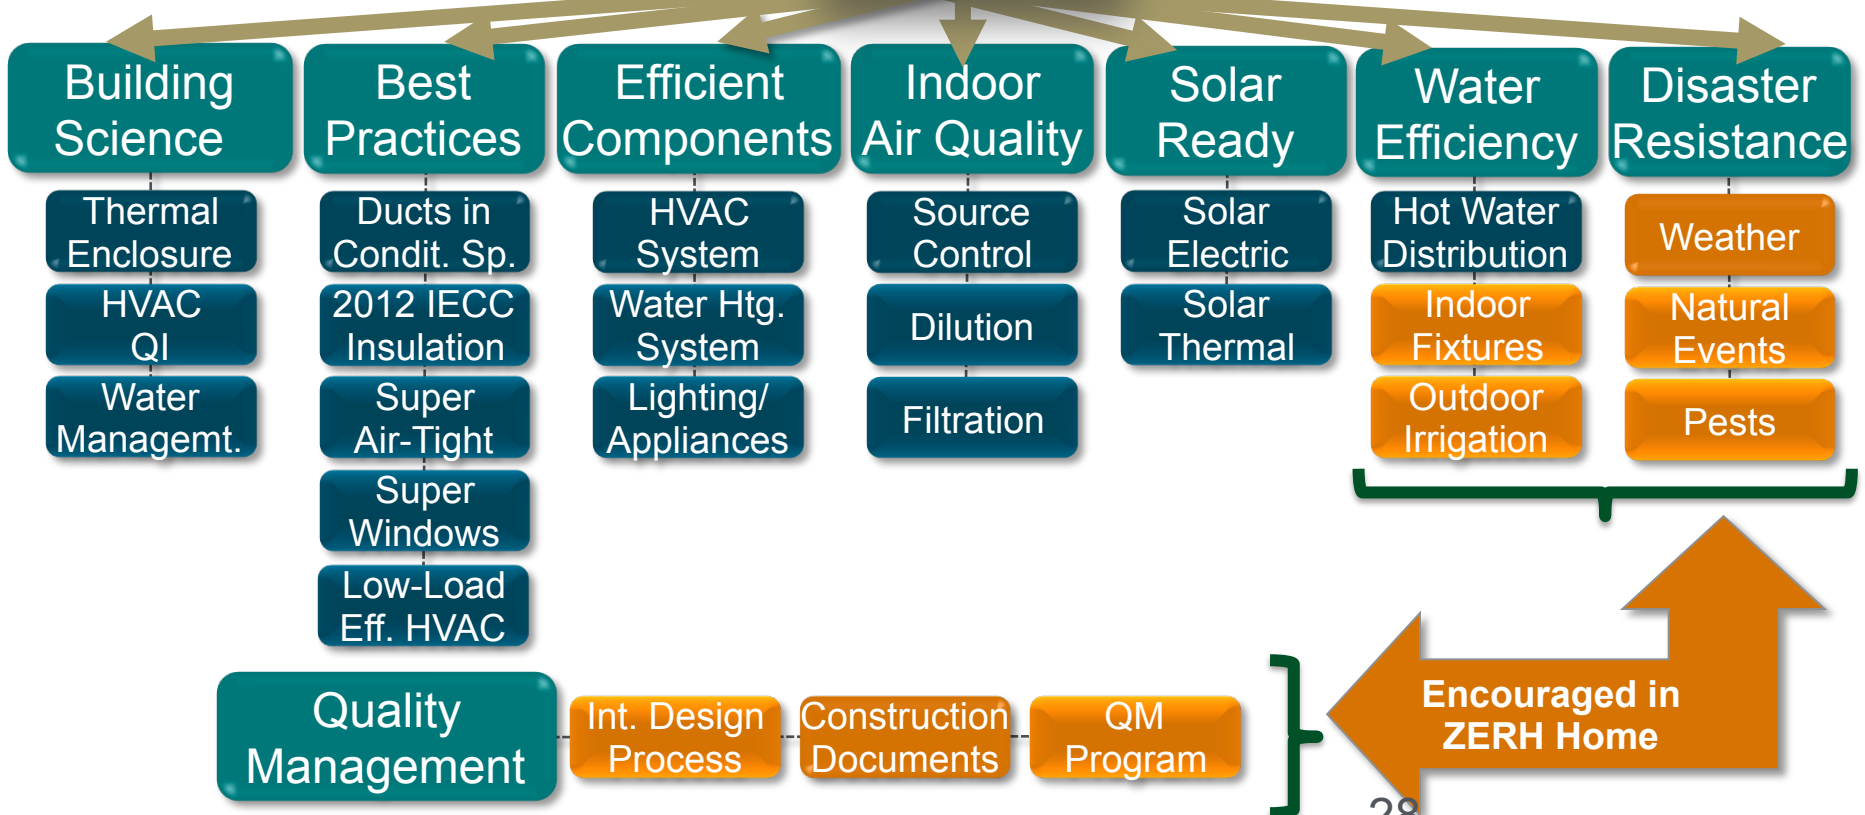

RALLY YOUR PARTNERS

- Energy Raters
- Home Performance Consultants
- Renew/Review/Revisit your Trade Allies
 - Design
 - Subs
 - Supply chain
- Other Resources
 - Link up with a Building America Team

GATHER YOUR RESOURCES

- Start by “Mining” the Building America Resources
 - General Energy Information (EERE Buildings)

Target Home Avg. HERS Scores

**Average DOE Challenge Home HERS Index by Climate Zone
(Overall Average = 55.5)**

Based on 1800, 2400, and 3600 ft² prototypes on climate-appropriate foundations.

Homes larger than the benchmark home size must use the size adjustment factor to determine the target HERS index

Exhibit 3: Benchmark Home Size²⁸

Bedrooms in Home to be Built	1	2	3	4	5	6	7	8
Conditioned Floor Area <small>Benchmark Home</small>	1,000	1,600	2,200	2,800	3,400	4,000	4,600	5,200

Note: Renewable energy systems may not be used to qualify for the Zero Energy Ready Home HERS Index Target Score, but may be used for the incremental HERS Index points needed for the Size Adjustment Factor.

$$\text{Size Mod. Factor} = \left[\frac{\text{CFA}_{\text{Benchmark Home}}}{\text{CFA}_{\text{Home to Be Built}}} \right]^{0.25}$$

[Not to Exceed 1.0]

A Verified Symbol of Excellence

A Symbol of Excellence

ACT 3: THE FUTURE IS HERE!

- The technologies, systems, and best practices are in place for high-performance homes today.
- The “Zero Energy Ready Home” has been proven in the market.
- With solar PV prices falling, a small investment can take these homes to a “zero” energy bill.

MINNESOTA'S 1ST DOE ZERH HOME

- Amaris Custom Homes
 - Ray Pruban
- Debuted in 2013 BATC Fall Parade of Homes
 - Rambler with full walkout basement
 - 3,542 sq. ft. conditioned
 - 5 bedrooms, 4 baths
 - St. Paul, MN (CZ=6)

- HERS = 41 w/o PV
- HERS = 4 w/ 10 KW PV

AMARIS CUSTOM HOMES

- BASELINE certified ENERGY STAR for Homes v3.0
 - »
- ENVELOPE meets or exceeds 2012 IECC levels
 - »
- DUCT SYSTEM within home's thermal boundary
 - »
- WATER EFFICIENCY (WaterSense Section 3.3 specs)
 - »
- LIGHTING & APPLIANCES ENERGY STAR qualified
 - »
- INDOOR AIR QUALITY (EPA IndoorairPLUS Checklist)
 - »
- RENEWABLE READY chaseway built-in for PV array

AMARIS CUSTOM HOMES

- ICF foundation
- 2x6 w/ ccSPU + 1" XPS
- Raised heel truss w/ 2" ccSPU + R-48 fiberglass
- Windows: $U = 0.25$
- Airtightness = 465@50PA
- 95% AFUE furnace & boiler
- 16 SEER AC
- ERV & source exhausts
- ENERGY STAR Appliances
- 90% LED; 10% CFL

- Good shape & orientation
- Passive solar design
- In-floor heating w/ tile
- No/Low VOC materials

AMARIS CUSTOM HOMES

- Specific Home Certifications
 - DOE Challenge Home (now ZERH)
 - ENERGY STAR Version 3
 - MN GreenPath - Emerald
 - LEED for Homes v4 Beta – Silver

- Builders Association of the Twin Cities ReggieSM Award of Excellence

AMARIS CUSTOM HOMES

- Challenges
 - Exterior foam
 - Mechanical systems
 - Water distribution
- Key Lessons
 - “Green” is challenging to sell because it is poorly defined
 - “Healthier living is built-in” resonates very well with his market
 - DOE ZERH label was his “best bang for the buck”
 - Has committed to 100% ZERH

AMARIS CUSTOM HOMES

- Fall Parade of Homes
 - Afton, MN
 - Model #299
 - \$899,000
- Custom Ranch
 - 3,800 sq. ft.
 - DOE ZERH w/ solar PV
 - “No utility bill guarantee” for 10 years (gas, elec, water)

BUILDING SCIENCE EDUCATION

- DOE recognizes a large building science void exists in post-secondary education;
 - They must increase the quantity/quality of building science education
 - To properly support high-performance buildings.

BUILDING SCIENCE EDUCATION

- The current “desired outcome” is to ensure all students in building design, engineering, construction, and operations will have:
 - a substantive “building science fundamentals” course early in their program,
 - solid “building science” concepts infused into their traditional courses, and
 - access to specialized, in-depth building science coursework

2015 DOE “RACE TO ZERO”

- National Renewable Energy Lab in Golden, CO
- 27 Universities; 33 Teams
- Competing to design cost-effective, zero energy ready homes for mainstream builders.

- Discussion & Questions
